Software Engineering

EXPERIENCE

IT Backend Internship at Alfath Corp

February 2024 – June 2024

MSIB Kampus Merdeka

- Collaborated with the team and mentors in creating a business control website for checking and validating customer data using Laravel Lumen.
- Create and design the database that will be used in the development of the control business website using MySQL
- Utilized Git for version control, managing codebase efficiently and make a better collaboration among team members.
- Assisted other teams with the development of the psychological assessment website and guestbook website.

PROJECT EXPERIENCE

Be-Biskon API (Business Control Website)

Internship Project

- Create a business control website API that serves to validate customer data.
- Has the main feature to validate and modify customer data entered into the system.
- Features role and permission management as well as Authentication and Authorization using JWT (JSON Web Token).
- Using Laravel Lumen and MySQL DBMS for website development and Swagger used for API documentation.

Inventory and Sales Web Project

Advanced Web Programming course project

- Creating an Inventory Web System based on a case study of an Agricultural Store
- Utilized Laravel framework, MySQL DBMS, JQuery, and Bootstrap to build an intuitive and visually appealing web application
- Has the main features to manage data on goods, distribution of goods, and sales of goods
- Has supporting features in the form of live search, live store, and live updates made using jQuery enhanced data entry process 75% faster

Financial Management Application

Mobile Programming Course Project

- Build a mobile application that is used to manage finances by recording income and expenses.
- Has a feature to scan shopping receipts to get spending data, where images will be sent to the API that has been provided using Dio dependencies on Flutter.
- Utilize Flutter for app creation and Firebase Firestore to store expense and income data.

CERTIFICATIONS
